

Basic 5 items of 37155-2

Item1: Setting the targets for infrastructures

- In order to achieve the goal of the smart community, relevant infrastructures should be identified and the targets for those infrastructures should be set.
- Example. Targets could be
 - -to point out the special area to be served.
 - -to improve energy efficiency.

Item2: Analyse the solutions for different infrastructures to achieve the targets

- In order to achieve the targets, the possible solutions should be analysed which based on risk assessment.

Item3: Validation and Verification

- The solutions should be validated and verified after all relevant phases and before solutions put into operation in order to meet the targets.

Item4: Monitoring the performance of infrastructures

- The assigned performance of infrastructures should be monitored and data should be collected in order to meet the goals.

Item5: Improve the targets

- In order to achieve the goals, the targets of infrastructures should be improved if necessary.
