On last scope item in section "the scope of SC 13" of N689-Draft: "• to enable object-related digital information exchange."		

I find no complementary info on this concept in the following section "context of the work of SC13"  
 Complementary info would make the understanding of object-related digital information exchange more accessible and the development of links to electronic data interchange standards.  
 Electronic Data Interchange (EDI) is the computer-to-computer exchange of business documents in a standard electronic format between business partners.
